Report Overview

A cylindrical roller thrust bearing is a particular type of roller bearing. Like other roller bearings, they permit rotation between parts, but they are designed to support a high axial load while doing this (parallel to the shaft). Higher speed applications require oil lubrication. Generally, they are composed of two washers (raceways) and the cylindrical roller elements which are typically caged. As opposed to roller thrust bearings, ball thrust bearings can generally operate at higher speeds but at lower loads.

The global Cylindrical Roller Thrust Bearings market size was estimated at USD 586 million in 2023 and is projected to reach USD 1006.97 million by 2032, exhibiting a CAGR of 6.20% during the forecast period.

North America Cylindrical Roller Thrust Bearings market size was estimated at USD 169.36 million in 2023, at a CAGR of 5.31% during the forecast period of 2024 through 2032.
