Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cynomolgus Monkey (Macaca Fascicularis) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Cynomolgus macaques (Macaca fascicularis) also known as the long-tailed or crab-eating macaque, is one of the most widely used non-human primate models in global biomedical research. Its close genetic, physiological, and anatomical similarity to humans, especially in immune and neurological systems, makes it a critical tool in drug discovery, vaccine development, toxicology studies, and disease mechanism research. Cynomolgus monkeys are indispensable in preclinical studies and play a key role in advancing public health, therapeutic innovation, and regulatory science. In the upstream supply chain, core raw materials include feed, veterinary drugs, and laboratory supplies critical to the health and adaptability of laboratory primates. Major suppliers in this domain include MP Biomedicals, Yongli Biotech, Beijing Keaoxieli, Pizhou Dongfang, Jiangsu Medicience, and Jiangsu Xietong. These companies play an essential role in maintaining the health standards, traceability, and experimental suitability of monkey populations used in research. Leading CROs such as JOINN Laboratories, WuXi AppTec, and Envigo (Inotiv) are key end-users in this market. These companies operate large-scale animal research platforms, adhere strictly to animal welfare regulations and ethical review processes, and play a vital role in promoting the standardization and industrialization of Cynomolgus Monkey (Macaca Fascicularis) supply chains worldwide. The Cynomolgus Monkey (Macaca Fascicularis) industry maintains strong gross profit margins, generally ranging from 40% to 70%, supported by the high entry barriers, strict breeding protocols, and value-added services. Customized breeding programs and long-term strategic contracts with CROs or research institutions further enhance profitability across the value chain. In 2024,

global Cynomolgus Monkey (*Macaca Fascicularis*) production reached approximately 69.42 K units, with an average global market price of around US\$ 14.4 k per unit. Vanny Bio Research, HZ-Bio, Envigo (Inotiv), WuXi AppTec, and JOINN Laboratories are among the major players in the Cynomolgus Monkey (*Macaca Fascicularis*) market. These companies play a critical role in supporting the global biopharmaceutical industry by providing high-quality Cynomolgus Monkey (*Macaca Fascicularis*) essential for scientific research and drug development. By application, Contract Research and Development Service Organizations (CROs) are the primary end-users of Cynomolgus Monkey (*Macaca Fascicularis*), accounting for 52% of global demand in 2024. CROs conduct outsourced preclinical studies, including efficacy testing, GLP-compliant toxicology assessments, and regulatory filings, on behalf of pharmaceutical and biotech companies. These firms require consistent access to high-quality animal models and represent the most volume-stable and quality-sensitive segment. Research institutes and universities also form a significant portion of demand, using Cynomolgus monkeys for studies on vaccines, immunological responses, and infectious disease transmission. Additionally, public health laboratories and vaccine developers contribute to demand, particularly during epidemic preparedness initiatives. The market is driven by rapid growth in the global biopharmaceutical sector, especially in areas such as monoclonal antibodies, vaccines, cell therapy, and gene therapy, where human-relevant animal models are indispensable. Ongoing investments in disease research, aging population healthcare, and infectious disease control are also expanding the demand base. Government-backed research funding and the rising importance of CROs further support the continued expansion of this market. However, the sector also faces significant restraints. Increasing scrutiny over animal welfare, evolving international transport and quarantine regulations, and the rising cost of breeding and compliance are all pressing challenges. Furthermore, the emergence of alternative testing technologies, including organoids, organ-on-chip platforms, and AI-driven in silico models, may gradually substitute some use cases of non-human primates, introducing long-term structural changes to the market landscape.

The global Cynomolgus Monkey (*Macaca Fascicularis*) market size was estimated at USD 1000.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
