Abstracts

Cytomegalovirus (CMV) infection is a common viral illness caused by human cytomegalovirus, a member of the herpesvirus family; while it often presents asymptotically in healthy individuals, it poses serious risks to immunocompromised patients (such as transplant recipients and those with HIV) and can cause congenital disabilities when transmitted during pregnancy, leading to lifelong health implications. The market for CMV infection encompasses diagnostics (serological and molecular tests), therapeutics (antiviral drugs like ganciclovir and valganciclovir), and preventive measures (such as vaccines in development), driven by the growing number of organ transplant procedures, rising awareness, and an expanding immunocompromised population globally.

The global Cytomegalovirus Infection market size was estimated at USD 720.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
