## Abstracts

D-allulose is the C-3 isomer of D-fructose, which is extremely rare in nature and is present in small amounts in substances such as wheat, plants of the genus *Rhamnus*, sugar beet molasses, and sugarcane molasses. D-fructose C-3 isomerization can be catalyzed by microbial derived ketose 3-isomerase. As a reducing hexose, it can undergo Maillard reaction with proteins or amino acids to improve food flavor, color, and taste. A number of research results show that allulose, different from sucrose and other sweeteners, has the effect of controlling obesity and preventing diabetes. It mainly improves insulin secretion and human blood sugar level by regulating the activities of fatty acid synthase and hepatic glucokinase in the liver. It is a good functional sweetener with low calorie and health effects.

The global D-Alulose Liquid market size was estimated at USD 112.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
