Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on D-Proline competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global D-proline production was approximately 5,400 tons, with an average selling price of about US\$28,000 per ton. Single-line capacity was approximately 400 tons per year, with an average gross profit margin of 20-30%. D-proline is an amino acid, a mirror image of the more common, naturally occurring L-proline. It is a white or pale yellow solid powder, primarily used as an intermediate in organic synthesis and pharmaceutical chemistry to synthesize various drugs and bioactive molecules, such as the migraine drug eletriptan. Upstream raw materials mainly include carbon and nitrogen sources such as glucose and corn steep liquor required through bio-fermentation and enzymatic catalysis, as well as substrates for chemical synthesis routes such as L-proline or related precursor compounds. Downstream applications are highly concentrated in the pharmaceutical and health supplement industries. In the pharmaceutical field, it is used as a key chiral building block in the synthesis of blockbuster drugs such as GLP-1 receptor agonists, while in the health supplement field, it is used in specific dietary supplement formulations.

The global D-Proline market size was estimated at USD 161.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
