## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on D Type Hydrapulper competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The D Type Hydrapulper is an improved version of the circular trough hydraulic pulper, specifically designed for the shredding of waste paper, pulp board, and broken paper. Its core design lies in the D-shaped trough structure. By altering the pulp flow path, the hydraulic vortex is shifted to one side, accelerating paper immersion and increasing rotor contact frequency, thereby shortening shredding time, increasing production capacity, and reducing energy consumption. In 2024, global production of D Type Hydrapulper was expected to be approximately 2,869 units, with prices ranging from US\$6,944 to US\$35,000 per unit, depending on equipment volume, manufacturer positioning, and configuration.

The global D Type Hydrapulper market size was estimated at USD 86.1 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
