## Abstracts

A DAC high-speed cable is a type of high-speed cable designed for short-distance, high-speed data transmission. It features fixed connectors at both ends and transmits electrical signals directly through copper wires, eliminating the need for optical-electrical conversion. This cable supports data transmission rates of up to 40Gbps or even 100Gbps, offering advantages such as low latency, high reliability, ease of deployment, and significant cost-effectiveness. It is widely used in modern data centers, cloud computing, 5G communications, the Internet of Things, and other scenarios that require fast and stable data transmission. DAC high-speed cables are suitable for interconnecting servers within the same rack or adjacent racks, as well as connecting switches to storage devices. Their simple structural design and copper core material not only ensure high performance but also provide good heat dissipation and The DAC High Speed Cable market mainly benefits from its technological advantages and cost-effectiveness: in short-distance transmission scenarios, direct-connect copper cables have become the preferred solution for internal interconnection in data centers due to their low latency, high reliability and significant cost advantages (only one-fifth of optical modules), especially suitable for high-density connection requirements between servers and switches; at the same time, application demand is growing strongly, and the development of technologies such as 5G, Internet of Things, and artificial intelligence has driven the explosive demand for high-speed data transmission.

The global DAC High Speed Cable market size was estimated at USD 1344.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.50% during the forecast period.
