The industry boasts a gross profit margin of 60%-70%. The upstream supply chain primarily involves the supply of core components and raw materials, including hardware such as servers and storage devices, as well as basic software such as operating systems and databases. The midstream involves the design, development, and integration of ERP software, encompassing functional module design, coding implementation, and integration with manufacturing execution systems (MES) and warehouse management systems (WMS). The downstream involves implementation and application, with end users including daily chemical manufacturers, brand owners, distributors, and retailers. Applications include production planning, quality control, supply chain collaboration, and omni-channel sales.

The global Daily Chemical Products ERP System market size was estimated at USD 475.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
