Report Overview

Dairy cultures and enzymes are essential components in the production of a wide range of dairy products. Dairy cultures consist of specific strains of bacteria that are added to milk to initiate fermentation, a process that transforms lactose into lactic acid, thereby altering the texture and flavor of the product. These cultures are crucial in making products like yogurt, cheese, and sour cream. Enzymes, on the other hand, are proteins that catalyze biochemical reactions in dairy processing. The most common enzyme used in dairy is rennet, which is vital in cheese making as it helps coagulate milk, separating it into curds and whey. Together, dairy cultures and enzymes are fundamental in developing the unique characteristics of various dairy products, influencing their taste, texture, and nutritional properties.

The global Dairy Cultures and Enzymes market size was estimated at USD 1468 million in 2023 and is projected to reach USD 2356.63 million by 2032, exhibiting a CAGR of 5.40% during the forecast period.
