Abstracts

Dairy products starters are specific, standardized cultures of microorganisms, primarily lactic acid bacteria, yeasts, and molds, used to initiate and control the fermentation process in the production of various dairy items such as yogurt, cheese, sour cream, buttermilk, and kefir. These starter cultures are essential for developing the desired texture, flavor, aroma, and acidity in the final product, while also contributing to preservation and inhibiting the growth of undesirable spoilage or pathogenic bacteria. They can be categorized into mesophilic or thermophilic types based on optimal growth temperatures and are available in various forms, including liquid, frozen, or freeze-dried (lyophilized) concentrates, designed for consistent performance and ease of use in both industrial and artisanal dairy processing.
