## Abstracts

Dark Riding System is an immersive entertainment experience system that uses virtual reality (VR) or augmented reality (AR) technology, and is usually used in amusement parks, theme parks and other places. It creates a riding experience that seems to be in a virtual world by combining multiple elements such as audio-visual effects, dynamic seats, and environmental interactions. In a "dark" or closed environment, users can feel the intense adventure, thriller or fantasy plot through the changes in virtual scenes and realistic action feedback. The dark riding system not only provides entertainment experience, but can also be used in education, training or psychotherapy. In recent years, driven by technological progress and upgraded consumer demand, the global dark ride system market has shown strong growth potential. As an entertainment device that combines immersive experience with high technology, dark ride systems are widely used in theme parks, amusement parks, and virtual reality experience halls, becoming an important tool to attract tourists. The rapid development of technologies such as virtual reality (VR), augmented reality (AR), and artificial intelligence (AI) has provided dark ride systems with richer interactive experiences and higher safety, becoming the core driving force for market growth. The support policies of various governments for the cultural tourism industry, especially the investment in theme parks and entertainment facilities, have also provided a good policy environment for market development. The compound annual growth rate of dark ride systems is expected to reach 10.25% from 2025 to 2031. From the perspective of application scenarios, theme parks are still the core market for dark rides, but the proportion is expected to decline slightly in 2031. This change reflects the accelerated penetration of non-theme park scenarios (such as commercial complexes and corporate exhibition halls), and the proportion is gradually increasing. For example, shopping malls attract young customers by introducing small immersive experiences. From a regional perspective, the rapid economic growth and prosperous tourism industry in emerging markets (such as the

Asia-Pacific region) will become an important direction for the expansion of the dark ride system market.

The global Dark-ride System market size was estimated at USD 210.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
