Report Overview

Data acquisition hardware comprises signal conditioning circuitry, sensors, and analog-to-digital converters. Sensors are also called transducers that convert physical parameters into measurable electrical signals. The signal circuitry converts sensor signals to numerical values. Data acquisition hardware is an industrial control system that collects the data from instruments and sensors positioned at isolated sites, then communicates and demonstrates this data at an essential site for monitoring and control purposes. It is also used to collect and analyze data in real time.

Data acquisition hardware is widely adopted for design validation, research and analysis, manufacturing and quality tests, asset condition monitoring, verification, diagnostics and repair, and computer based control and automation. Further, increasing analysis and design activities such as modeling behavior of scientific phenomenon and new product design is expected to support the growth of the data acquisition hardware market. Operations such as verifying product lifecycle, testing for accuracy and reliability, ensuring conformance to industry standards, and establishing evidence, design validation and testing is required for maintaining the required standards. The manufacturing and quality testing for electrical, mechanical, and environmental parameters is also carried out with the help of data acquisition hardware. Diagnostics and repair systems are useful to recognize root cause of the problem within machinery and image inspection systems. Moreover, asset conditioning and monitoring solutions are used for the durable condition monitoring of equipment such as turbines and compressors and to detect problems and prevent failures. Condition monitoring helps to prevent outages, optimize performance, and reduce repair costs. Computer based control systems help in handling various processes and machinery without human interaction. However, increasing complexity related to signal conditioning in the data acquisition market is expected to restrain the growth of this market.
