## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Data Center Connectors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Data Center Connectors are physical interface components that enable the stable transmission of electrical signals, currents, or optical signals within data centers and between devices. They act as "bridges" connecting core infrastructure like servers, switches, storage devices, and cabinet cabling, directly determining data transmission speed, stability, and density to meet the high-bandwidth, low-latency, and high-reliability communication needs of data centers. Data center connector prices vary significantly depending on factors such as type, specifications, and brand. For example, a 2.54mm pitch IDC connector can be priced as low as \$0.05 per unit. A 40G QSFP data center connector costs around \$1.24-1.53. 3M's two-row, one-contact IDC plug starts at \$3.77 per unit and goes up to \$3.02 per unit for quantities of 1,000 or more. Siron's small-size 8-40-pin IDC connectors range in price from \$8.96 to \$22.93.

The global Data Center Connectors market size was estimated at USD 5563.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.60% during the forecast period.
