## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Data Center Ethernet Switches ICs competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Data Center Ethernet Switches ICs are integrated circuits specifically designed to power high-performance Ethernet switches in modern data centers. These chips manage the fast switching and routing of large volumes of data between servers, storage systems, and external networks. They are optimized for ultra-low latency, high throughput (often 400G and beyond), advanced telemetry, deep buffering, and support for protocols such as RDMA over Converged Ethernet (RoCE). In 2024, global Data Center Ethernet Switches ICs production reached approximately 34461 K PCs, with an average global market price of around US\$ 5.2 per PC. The production capacity for Data Center Ethernet Switches ICs in 2024 was approximately 34983 K PCs. The typical gross profit margin for Data Center Ethernet Switches ICs is between 30% and 40%. The Data Center Ethernet Switch ICs market refers to the global industry focused on designing, manufacturing, and supplying integrated circuits used in data center Ethernet switches, which are critical for interconnecting servers, storage systems, and networking equipment. These ICs include high-performance ASICs, programmable switch chips, and hybrid solutions that support speeds ranging from 25?GbE to 800?GbE, catering to cloud computing, AI workloads, high-performance computing (HPC), enterprise networks, and telecom infrastructures. The market is dominated by major players such as Broadcom, Marvell, Cisco, NVIDIA, and Huawei, offering products that emphasize low latency, high throughput, energy efficiency, and advanced features like programmability and network virtualization support.
