Report Overview

Fabric-based architecture aids the data center by eliminating the need of multiple layers of devices, switch-to-switch interactions, and also the shared network protocols. It reduces the complexity of a data center network and enhances its efficiency. In a data center, fabric represents interconnection of thousands of servers, storage, and Others networking ports in an ultra-low latency infrastructure, which provides any-to-any connectivity, making each device only single hop away from every Others device. Nowadays, many organizations have started adopting solutions offered by the data center fabric market, as they facilitate the reduction of operational and capital expenses, resulting in reduced Total Cost of Ownership (TCO).
