Abstracts

A Data Center Hyper-converged System is an integrated IT infrastructure solution that combines compute, storage, networking, and virtualization resources into a single, software-defined platform. Unlike traditional data centers where these components are managed separately, hyper-converged systems centralize management through a unified software layer, often using hypervisors like VMware, Hyper-V, or KVM. This architecture simplifies deployment and scaling, reduces operational complexity, improves agility, and lowers total cost of ownership. It is particularly beneficial for private clouds, virtual desktop infrastructure (VDI), edge computing, and backup/disaster recovery setups. In 2024, global A Data Center Hyper-converged System revenue reached approximately US\$110.3 million.
