## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Data Center PDU (Power Distribution Unit) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global Data Center PDU (Power Distribution Unit) market reached approximately 3.5 million units, with an average global market price of around US\$ 890 per unit. Data Center PDU (Power Distribution Unit) is a specialized electrical device designed to distribute reliable and safe power from an uninterruptible power supply (UPS), utility source, or generator to multiple servers, networking hardware, and other IT equipment within data center racks. Unlike simple power strips, PDUs are engineered for high-density, mission-critical environments and come in various forms ranging from basic PDUs (providing simple power distribution) to intelligent or smart PDUs (offering features such as real-time power monitoring, load balancing, remote switching, outlet-level metering, and environmental sensing). They are essential for ensuring efficient energy use, minimizing downtime, supporting scalability, and enhancing overall data center power management. The Data Center PDU (Power Distribution Unit) market industry chain begins upstream with suppliers of raw materials and components such as copper and aluminum conductors, circuit breakers, surge protectors, sensors, enclosures, and embedded control electronics; moves midstream through manufacturers and OEMs/ODMs that design, assemble, test, and certify basic, metered, monitored, and intelligent PDUs while ensuring compliance with global standards; and extends downstream to distributors, system integrators, hyperscale cloud providers, colocation facilities, enterprise and edge data centers, supported by DCIM software vendors and service providers focused on efficiency, monitoring, sustainability, and power optimization in modern digital infrastructures.

The global Data Center PDU (Power Distribution Unit) market size was estimated at USD 3115.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
