## Abstracts

A data diode is a unidirectional network communication device that enables the safe, one-way transfer of data between segmented networks. Data diode design maintains physical and electrical separation of source and destination networks, establishing a non-routable, completely closed one-way data transfer between networks. Data diodes effectively eliminate external points of entry to the sending system, preventing intruders and contagious elements from infiltrating the network. Securing all of a network's data outflow with data diodes makes it impossible for an insecure or hostile network to pass along malware, access your system, or accidentally make harmful changes. The global Data Diode Security Products market size is expected to grow for the next five years. Among all the manufacturers, Owl Cyber Defense contributed most among the world, the global share reach 16.09% in 2019, which is 40.39 million, which is 15.78 million more than the Fox-IT, the second largest company among the world. The Data Diode Security Products is divided into ruggedized Data Diode, and regular Data Diode. According to the research, the revenue of the ruggedized Data Diode is three times more than the regular one. As for the application, the Government segment contributed most, which is 2469 units in 2019.

The global Data Diode Security Products market size was estimated at USD 408.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.10% during the forecast period.
