Real-time data quality and governance refers to the process of capturing, processing, and delivering data as soon as it is generated, without any delay or latency. Data Quality and Governance Cloud enables real-time data quality and governance by leveraging streaming technologies, such as Pub/Sub from Google Cloud, Azure Event Hubs from Microsoft Azure, and Amazon Kinesis from Amazon Web Services, that can handle high volumes and velocities of data.
- Rising use of artificial intelligence and machine learning:** Artificial intelligence (AI) and machine learning (ML) are transforming the way organizations use and manage data. AI and ML can help automate and optimize various aspects of data quality and governance, such as data discovery, data quality, data mapping, data transformation, and data governance. Data Quality and Governance Cloud leverages AI and ML capabilities to provide intelligent

and self-service data quality and governance solutions that can reduce errors, improve efficiency, and enhance data value. Emergence of new data sources and types: Organizations are dealing with an increasing variety and complexity of data sources and types, such as social media, IoT devices, sensors, web logs, images, videos, and audio. These data sources and types pose new challenges and opportunities for data quality and governance, as they require different methods and tools to collect, process, and integrate them. Data Quality and Governance Cloud supports the integration of diverse and complex data sources and types, by providing connectors, adapters, APIs, and formats that can handle various data scenarios.
