Abstracts

Data security posture management (DSPM) provides visibility as to where sensitive data is, who has access to that data, how it has been used, and what the security posture of the data stored or application is. DSPM takes the principles of data security and primarily applies them to cloud environments. Many of the concepts used to secure data on-premises and in applications are the same: data discovery, data access control, and data monitoring. An effective DSPM solution discovers where sensitive data lives across your entire cloud environment, including IaaS, databases, SaaS applications, and cloud file storage, analyzes the data risks and exposures, and enables cloud, IT, and security teams to efficiently detect threats and close the security gaps.

The global Data Security Posture Management (DSPM) market size was estimated at USD 1583.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.70% during the forecast period.
