## Abstracts

Data Visualization Consulting Service refers to a specialized category of data and analytics advisory and implementation services that help organizations translate complex, heterogeneous data into clear, interactive visual representations that support better and faster decision-making. Rather than simply 'drawing charts', data visualization consulting spans the full lifecycle: clarifying business questions and KPIs; assessing current data sources and BI maturity; selecting appropriate visualization tools (e.g. Tableau, Power BI, Qlik, Looker); designing information architecture and data models; and building dashboards, reports and stories that fit specific user roles and decisions. Typical engagements include executive dashboards, self-service BI, embedded analytics, and customer-facing visualizations, with consultants responsible for data preparation and integration, performance optimization, governance and training so that users actually adopt the tools. Advanced projects increasingly integrate predictive and prescriptive analytics, geospatial visualization and real-time streaming data; some providers position this as 'data storytelling', explicitly focusing on narrative, layout and design to ensure that insights drive action.

The global Data Visualization Consulting Service market size was estimated at USD 2270.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
