## Abstracts

Date coders are pieces of equipment used on production lines to print date codes, which can apply date information on products, packaging, and labels. Date coding of products ? especially food, beverage, and pharmaceutical products?is required by local regulations around the globe. Manufacturers also need date codes for internal tracking and to ensure that products are shipped promptly to market. The date that a product is manufactured often determines a product?s expiration date, which is required to be prominently displayed on certain food, beverage, and pharmaceutical product packaging and labeling. Most date coders today are automatic, incorporating software programmed to automatically generate and apply date codes on large volumes of products. Many date coders are used on high-speed production lines and are able to maintain a high print quality while printing on moving products and packages. On some of these production line coders, line operators manually generate codes at the beginning of each day's shift.

The global Date Coder market size was estimated at USD 2504.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
