Report Overview

Double Block and Bleed (DBB) Valve is a type of valve that serves the purpose of isolating and decreasing pressure in a system. It is made up of two shut-off valves or 'blocks' that are connected by a pipe or conduit. The pipes are separated by a valve in between, often referred to as a 'bleed' valve. When all three components are closed, it enables the system to be shut down and isolated from any increase in pressure.
