## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on DBC-ZTA Ceramic Substrate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Zirconia Toughened Alumina (ZTA) is a composite phase ceramic material with Al<sub>2</sub>O<sub>3</sub> as the matrix and partially stabilized ZrO<sub>2</sub> as the toughened phase, providing a good toughening effect. ZTA substrate has high strength, toughness, and reflectivity, and can withstand severe thermal shock testing. ZTA substrate has good flexural strength compared to ordinary Al<sub>2</sub>O<sub>3</sub> substrates and is widely applied in areas that require strong current-carrying and heat-dissipating capabilities. HM can supply high-precision and competitively priced ZTA Substrates with various specifications for choices. The industry for Direct Bonded Copper (DBC) on Zirconia Toughened Alumina (ZTA) ceramic substrates is a critical niche within the power electronics supply chain, driven by the increasing demand for high-performance and reliable power modules. The value chain begins with the upstream ZTA ceramic substrate manufacturers, a highly specialized segment dominated by a few key players. Maruwa Co., Ltd. in Japan and ChaoZhou Three-Circle (Group) Co., Ltd. in China are two of the most significant suppliers, leveraging their advanced materials science expertise to produce the base ceramic material. ZTA is favored for its superior mechanical strength and fracture toughness compared to standard alumina, which is essential for withstanding the thermal and mechanical stresses in high-power applications. This foundational material is then supplied to midstream DBC-ZTA substrate manufacturers, where the copper foil is bonded to the ceramic using a proprietary high-temperature process. This middle layer of the value chain is highly competitive, featuring global players such as Rogers Corporation, KCC Corporation, NGK Electronics Devices, Inc., and Heraeus Electronics, alongside rapidly growing Chinese companies like Jiangsu Fulehua

Semiconductor Technology. The final product is a robust and highly conductive substrate that forms the core of a power module. The value chain culminates in the downstream IGBT power module manufacturers, including industry leaders like Infineon Technologies, STMicroelectronics, Mitsubishi Electric, StarPower Semiconductor, and CRRC Times Electric. These companies integrate the DBC-ZTA substrates into their power modules, which are then used in a wide range of applications from electric vehicles to renewable energy systems.

The global DBC-ZTA Ceramic Substrate market size was estimated at USD 186.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
