Report Overview

A distributed Bragg reflector laser (DBR) is a type of single frequency laser diode. Other practical types of single frequency laser diodes include DFB lasers and external cavity diode lasers. A distributed-feedback laser (DFB) is a type of laser diode, quantum-cascade laser or optical-fiber laser where the active region of the device contains a periodically structured element or diffraction grating. The structure builds a one-dimensional interference grating (Bragg scattering), and the grating provides optical feedback for the laser. The differences between DBR lasers and DFB lasers. The distinguishing difference between the two architectures is the location of the grating within the epitaxial structure. The DBR uses a high index contrast, high reflectivity surface grating. The DFB uses a low index contrast, low reflectivity buried grating.
