## Abstracts

A DC-DC chip is an integrated circuit chip used for direct current (DC) power conversion, which can convert an input DC voltage into a different output DC voltage. It is commonly used in electronic equipment to provide power management and voltage conversion functions. The DC/DC chip can realize different power conversion functions, such as boost (Boost), buck (Buck), buck-boost (Buck-Boost), etc. They convert the input DC voltage through internal circuits and control algorithms to meet the power requirements of different electronic devices. The design and function of the DC/DC chip depends on the specific application requirements. They usually need to have high efficiency, stability, low power consumption and other characteristics to ensure the reliability and performance of power conversion. DC/DC chips play an important role in electronic equipment and are widely used in mobile equipment, communication equipment, industrial control, automotive electronics and other fields. They can provide a stable power supply to ensure the normal operation of equipment and meet the voltage requirements of different circuits and components.
