Abstracts

A DC electric welding machine is a device that utilizes direct current (DC) to generate the heat required for joining metals through fusion. Unlike AC (alternating current) welders, DC machines provide a more stable arc, reduced spatter, and better control over penetration, making them suitable for a wide range of materials—including stainless steel, cast iron, and non-ferrous metals—as well as various welding processes such as stick (SMAW), TIG (GTAW), and MIG/MIG (GMAW). These machines are valued for their versatility across industrial, construction, automotive, and fabrication applications, where precision, ease of use, and consistent performance are critical.

The global Dc Electric Welding Machine market size was estimated at USD 7800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
