## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on DC Electromagnetic Brakes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. DC Electromagnetic Brakes are braking devices that use direct current (DC) electromagnetic force to engage or disengage the brake mechanism. When DC current is applied to the brake coil, it generates a magnetic field that attracts a ferromagnetic surface, applying braking force to stop or slow down a rotating component. These brakes are commonly used in electric motors, industrial machinery, and automation systems for precise and reliable braking control.

The global DC Electromagnetic Brakes market size was estimated at USD 2527.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
