The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on DC Gas Shielded Welding Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A DC gas shielded welding machine is a type of equipment that uses a DC power supply and a shielding gas to efficiently weld metal workpieces. It is a type of metal arc welding. Its main working principle is to form an arc between the electrode and the workpiece, melt the end of the electrode wire to form a molten pool, and at the same time, use a shielding gas (such as carbon dioxide or a mixed gas) to isolate the welding area from the air to prevent oxidation and nitridation. This equipment usually has the advantages of a wide current adjustment range, good arc stability, fast welding speed, small spatter, and beautiful molding. It is suitable for welding of medium and thick plate carbon steel, stainless steel, low alloy steel and other materials.

The global DC Gas Shielded Welding Machine market size was estimated at USD 1016.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
