Abstracts

A DC motor for an EPB (Electric Parking Brake) is an electric motor used in vehicles to actuate the parking brake mechanism electronically. EPB systems are an alternative to traditional manual or cable-operated parking brakes. In an EPB system, a DC motor is typically used to engage or release the brake calipers on the vehicle's rear wheels. When the driver activates the EPB, the motor receives an electrical signal, which rotates a gear or shaft to apply force to the brake mechanism. When the driver deactivates the EPB, the motor reverses the motion, disengaging the brake.

The global DC Motor for EPB market size was estimated at USD 784.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
