## Abstracts

Dc sputtering coater is a kind of instrument which generates high energy ion beam by DC power supply, and disengages the atoms or molecules on the surface of the target by bombarding the surface of the target and forms conductive film on the substrate. It is widely used in the preparation of scanning electron microscopy (SEM) samples, by depositing a layer of conductive metals (such as gold, silver, platinum, etc.) on the surface of non-conductive samples, reducing the charge accumulation of samples at high voltage and improving the image quality.
