Abstracts

The DC traction power converters product of urban rail system refers to the core power electronic equipment used in the DC traction power supply system of urban rail transit, which is responsible for converting, controlling, and optimizing electrical energy. It mainly includes rectifiers, inverters, and DC converters. The rectifier converts AC power into DC power, providing a stable DC traction power supply for subway trains. The inverter converts DC power into AC power, which can be used to feed back electrical energy to the grid during train braking. The DC converter is used to adjust the DC voltage level to meet the needs of different equipment. These converters ensure the stable operation and energy - saving efficiency of urban rail transit vehicles through precise control of parameters such as voltage, current, and frequency. The price of DC Traction Power Converters Product of Urban Rail System varies depending on factors such as product type and power. For example, the FOB price of a rectifier is generally between US\$120,000 and US\$200,000 per unit. For example, the Siemens SINAMICS DCM 6RA80934GV620AA0 DC converter costs approximately US\$112,398.05.
