## Abstracts

DC Vaccine Technology utilizes Dendritic Cells (DCs), which are antigen-presenting cells, to activate T-cells and elicit an immune response against tumors. In this technology, DCs are extracted from patients, cultured, activated, and loaded with tumor-associated antigens in vitro to gain specific tumor recognition ability. These processed DCs are then reinfused into patients to stimulate T-cells and initiate an immune attack against tumors. DC Vaccine Technology holds broad application prospects in the field of tumor immunotherapy and provides new treatment options for cancer patients.

The global DC Vaccine Technology market size was estimated at USD 317.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
