Abstracts

DDR5 Temperature Sensor (TS) is an integrated thermal monitoring component embedded within DDR5 memory modules, designed to continuously measure and report the operating temperature of the RAM in real-time. It functions as a critical element for system thermal management, enabling dynamic adjustments to cooling solutions or memory performance?such as throttling clock speeds?to prevent overheating, ensure data integrity, and extend hardware lifespan. Unlike earlier memory generations where thermal sensing was often external or less standardized, DDR5 TS adheres to JEDEC specifications, providing accurate, on-die temperature readings that support advanced power and thermal regulation in high-performance computing, data centers, and gaming systems.

The global Ddr5 Temperature Sensor (Ts) market size was estimated at USD 185.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.65% during the forecast period.
