Abstracts

De-aromatic solvent oil is a specialized petroleum-derived hydrocarbon solvent that has undergone advanced refining processes, such as hydrotreating or extraction, to significantly reduce or eliminate aromatic compounds?particularly benzene, toluene, and xylene?resulting in a product with low odor, low toxicity, and high solvency power. This solvent is characterized by its clear appearance, chemical stability, and low volatility, making it suitable for applications where stringent health, safety, and environmental regulations must be met, such as in industrial cleaning, coatings, adhesives, agrochemicals, printing inks, and metalworking fluids. Its properties, including a high flash point and low sulfur content, further enhance its utility in formulations requiring both performance and compliance with increasingly strict global standards on volatile organic compounds (VOCs) and worker exposure limits.

The global De Aromatic Solvent Oil market size was estimated at USD 3200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
