Abstracts

De-oiled sunflower lecithin is a natural byproduct derived from the oil extraction process of sunflower seeds, where the crude lecithin undergoes a de-oiling procedure to remove residual oils and fats, resulting in a powdered or granulated form with high phospholipid concentration. This purified substance serves as a versatile emulsifier, stabilizer, and dispersing agent, widely used across the food, pharmaceutical, nutraceutical, and cosmetic industries due to its non-GMO, allergen-free (e.g., soy-free), and clean-label properties. Its functional benefits include improving texture, extending shelf life, enhancing nutrient absorption, and supporting formulations in products such as chocolate, baked goods, dietary supplements, and skincare items, making it a preferred alternative to soy or egg lecithin in health-conscious and specialty markets.

The global De Oiled Sunflower Lecithin market size was estimated at USD 120.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
