## Abstracts

A dead blow hammer is a hammer that has a function to reduce the recoil when striking a workpiece. Compared to a normal hammer, it reduces the burden on the operator's wrist and elbow, enabling work over a longer period. The surface is plastic with a small iron ball inside the head, which reduces recoil and transfers all the energy of the blow to the workpiece by the weight of the iron ball, providing a striking force equivalent to that of a metal hammer. The plastic surface also has the advantage of reducing damage to the striking surface. The use of dead blow hammers is the same as that of ordinary hammers. Some hammers have a resin head that can be replaced for maintenance. One thing to keep in mind when using dead blow hammers is that they have a large striking force. Therefore, they should not be used to strike small objects that require precision. Also, the heavier the hammer, the greater the striking force, but the more difficult it is to hit accurately.

The global Dead Blow Hammer market size was estimated at USD 326.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
