Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dechlorinator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A dechlorinator is a chemical specifically designed to remove free or combined chlorine from water or other media. It converts active chlorine into harmless compounds, such as chloride ions, through chemical reactions, thereby reducing or eliminating the presence of chlorine. Dechlorinators are widely used in drinking water treatment, sewage treatment, industrial circulating water systems, and other occasions where residual chlorine needs to be removed to prevent chlorine from corroding equipment, affecting the environment, or potentially harming human health. Common dechlorinators include reducing agents such as sodium sulfite (Na_2SO_3) and sodium thiosulfate ($\text{Na}_2\text{S}_2\text{O}_3$). The development trend of dechlorination agents is moving towards a more environmentally friendly and efficient direction. With the continuous improvement of environmental protection and water quality safety requirements, traditional chemical dechlorination methods are gradually shifting to green chemical technology to develop new dechlorination agents that are safer and residue-free. In addition, researchers are exploring the use of bio-based materials or nanotechnology to improve dechlorination efficiency and selectivity to meet the needs of different application scenarios. At the same time, in order to cope with complex and changeable actual working conditions, such as high-concentration chlorine pollution or the coexistence of multiple pollutants, the research and development of composite dechlorination agents has also become a hot topic, aiming to provide a one-stop solution that can effectively remove chlorine and treat other harmful substances to ensure the safety of the environment and public health.

The global Dechlorinator market size was estimated at USD 185.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
