Report Overview

Decoupled CMS software is a type of software that separates the content management system (CMS) from the content delivery system (CDS). A CMS is a software that allows users to create, edit, and manage digital content, such as text, images, videos, and more. A CDS is a software that delivers the content to various channels and platforms, such as websites, mobile apps, social media, and more. In a decoupled CMS software, the CMS and the CDS are independent of each other and communicate through an application programming interface (API). This means that the CMS can store and manage the content in a centralized repository, while the CDS can retrieve and display the content in different formats and layouts according to the needs of each channel and platform .
