Abstracts

A Dedicated Outdoor Air System (DOAS) is a specialized HVAC solution designed to decouple ventilation and space conditioning by separately managing outdoor air intake and conditioning from the recirculated indoor air; it primarily focuses on delivering precise amounts of preconditioned (dehumidified, cooled, or heated) outdoor air to maintain indoor air quality (IAQ) while allowing other systems, such as radiant panels or fan coils, to handle the sensible cooling or heating loads within a building. This approach enhances energy efficiency by reducing the latent load on secondary systems and minimizing overcooling or reheating, making it particularly effective in humid climates or buildings with high occupancy and strict IAQ requirements, such as schools, hospitals, and commercial spaces.

The global Dedicated Outdoor Air System market size was estimated at USD 1500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
