## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Deep Sea Temperature Logger competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A deep-sea temperature logger is an instrument specifically designed for long-term recording of seawater temperature changes under high pressure, low temperature, and complex salinity environments. It typically consists of a high-precision temperature sensor (such as a resistance temperature detector or thermistor), a data logging module, a battery power system, and a pressure-resistant housing. Its primary function is to acquire high-precision temperature data stably and over long periods in the deep-sea environment for applications such as climate change research, ocean circulation analysis, and ecosystem monitoring. The product is priced at approximately \$9,000 per unit, with global sales of around 42,000 units. Gross profit margin averages between 45% and 60%. The upstream supply chain for deep-sea temperature loggers encompasses high-sensitivity temperature sensors (such as the PT1000), high-capacity lithium batteries (>100 Ah), pressure-resistant housings (titanium alloy or POM plastic), and data processing chips. Key performance characteristics include a temperature sensitivity of 0.0001°C and a pressure rating exceeding 10,000 PSI. Downstream applications primarily serve research institutions, marine engineering companies, environmental organizations, and meteorological departments, which have a strong demand for high precision, long endurance, deep-sea adaptability, and data traceability. Future development will focus on multi-parameter integration (temperature, salinity, depth), AI-driven data analysis and automatic early warning systems, and integration with satellite communication technology to achieve real-time data synchronization and intelligent monitoring on a global scale.

The global Deep Sea Temperature Logger market size was estimated at USD 380.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
