## Abstracts

A deepwater drilling riser is a crucial component used in offshore drilling operations, connecting a drilling rig or floating platform to the seabed during deepwater exploration. It serves as a conduit for drilling fluids, hydrocarbons, and other materials between the seabed and surface facilities, withstanding the extreme pressures and conditions found in deepwater environments, often at depths exceeding 1,000 meters. Deepwater risers are designed to be flexible or rigid, such as Steel Catenary Risers (SCR) or Hybrid Risers, to accommodate ocean currents, wave movements, and dynamic forces. These risers are essential for safe and efficient deepwater drilling and production, enabling the extraction of oil and gas from reservoirs located far beneath the ocean's surface.

The global Deepwater Drilling Riser market size was estimated at USD 215.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
