Abstracts

DeFi Yield Farming is a way for people to earn rewards by lending or staking their cryptocurrency in Decentralized Finance (DeFi) Platforms. In simple terms, it allows users to put their digital assets to work, generating interest or rewards over time. Think of it like putting money in a savings account but in the crypto world. Users provide liquidity, which means they supply their crypto to help others trade or borrow, and in return, they earn rewards, usually in the form of tokens. Yield farming is typically done through smart contracts, which are self-executing contracts with the agreement directly written into code. This means that everything happens automatically, without the need for a middleman. Different platforms offer various yield farming opportunities, and the rewards can vary based on how much liquidity a user provides and for how long.

The global DeFi Yield Farming Platform Development market size was estimated at USD 86.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
