Report Overview

Defoamers for architectural coatings are chemical additives designed to control foam formation during the production, application, and storage of paints and coatings used in architectural applications. These additives work by reducing the surface tension of the liquid, allowing trapped air to escape and preventing foam formation. Defoamers for architectural coatings play a crucial role in ensuring the quality and performance of paints and coatings by preventing issues such as cratering, pinholing, and uneven film formation. They are widely used in various architectural coatings, including interior and exterior paints, primers, and sealants.
