Defrosting and Thawing Equipment is a device used to thaw food. It can be initially divided into water vapour to thaw and radio frequency technology (including microwave) to thaw. Classic thawing methods, such as natural thawing or immersion thawing, not only take a long time, but also lose part of the quality during thawing, and the flavour of the food may change, and bacteria may grow. Modern thawing equipment like water vapour thawing equipment and radio frequency technology thawing equipment can solve the above problems and can be used for large-scale thawing. At present, microwave thawing technology is rapidly developing....
