Abstracts

Degassing valves are also called as freshness valves, aroma valves or coffee valves. They are designed to allow pressure to be released from an airtight package while not allowing external atmosphere (i.e. air with 20.9% O₂) to enter the package, which are critical in preserving the coffee from losing its aroma or freshness. These are proved to be the best for degassing of CO₂ while not letting the oxygen, moisture or any contaminants to enter in bulk bags or pouches. The key players of Degassing valves include CCL Industries, Goglio and Plitek, etc. The top three players hold a share over 36%. Europe is the largest market, has a share about 42%. In terms of product type, Circle is the largest segment, occupied for a share of about 70% and in terms of application, Coffee has a share about 72 percent.
