Abstracts

Dehydrated mushroom flakes refer to mushrooms that have undergone a dehydration process to remove moisture content, resulting in a lightweight, shelf-stable product that can be rehydrated for use in cooking or consumed directly as a dry ingredient. This form preserves the umami flavor, nutritional value, and versatility of mushrooms while extending their shelf life significantly compared to fresh varieties. Commonly made from species such as shiitake, porcini, or button mushrooms, these flakes are valued for their concentrated taste, ease of storage and transportation, and utility across a wide range of culinary applications, including soups, sauces, seasonings, and ready-to-eat meals. The dehydration process typically involves air-drying, freeze-drying, or oven-drying methods, which help retain the mushrooms' essential characteristics while making them suitable for global distribution and diverse consumer preferences.

The global Dehydrated Mushroom Flakes market size was estimated at USD 175.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
