### Report Overview:

Dehydration toilet doesn't require water to flush down human waste. These toilets provide the right environment for human waste, toilet paper as well as other organic materials to break down via a natural process into an inoffensive compost-like material. As a matter of fact, the water in human waste is conserved through recycling and the solid waste can then be used to produce organic fertiliser. Waterless toilets are also referred to as dehydrating toilets because they dry out the faeces of water (known as grey water).
