Abstracts

The Delta parallel robot is a high-speed, light-duty parallel robot. It mainly consists of a fixed base, driving arms, driven arms, and an end effector. Its structural characteristics include multiple driving arms connected to the fixed base through revolute joints, with the other ends of the driving arms connected to the driven arms via spherical joints or Hooke's joints, and the ends of the driven arms attached to the end effector. This structure enables the robot to move quickly, position accurately, and achieve high repeatability in positioning, making it particularly suitable for high-speed sorting, packaging, and other operations. Its motion trajectories can take various forms, such as straight lines and curves.

The global Delta Parallel Robots market size was estimated at USD 4773.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
