Abstracts

Demulsifiers, or emulsion breakers, are a class of specialty chemicals used to separate emulsions, for example, water in oil. They are commonly used in the processing of crude oil, which is typically produced along with significant quantities of saline water. This water (and salt) must be removed from the crude oil prior to refining. If the majority of the water and salt are not removed, significant corrosion problems can occur in the refining process.

The global Demulsifier market size was estimated at USD 1880.16 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.02% during the forecast period.
